In this case, you can use Excel's LOOKUP function that is analogous to VLOOKUP but works with arrays as well as with individual values.. Let's consider the following example, so that you can better understand what I'm talking about.. LOOKUP AND SUM - look up in array and sum matching values In case your lookup parameter is an array rather than a single value, the VLOOKUP function is of no avail because it cannot look up in data arrays.

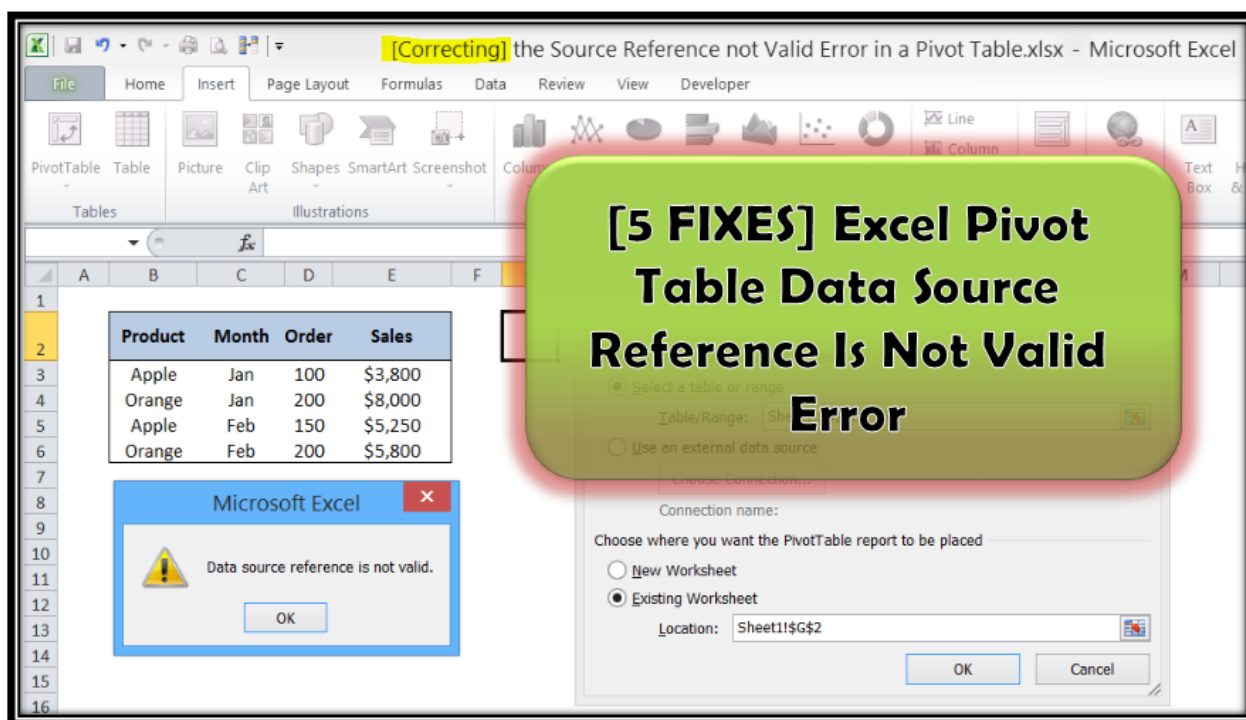

1. [consolidate multiple pivot tables excel 2010](#)
2. [multiple consolidation ranges pivot table excel 2013](#)

If we add the above formulas to the 'Summary Sales' table from the, the result will look similar to this: Download this.. Since all of the above formulas are array formulas, remember to press Ctrl+Shift+Enter to enter them correctly in a cell.
